| 'Novel Coronavirus nCoV-2019'<br>Coronavirus–COVID-19<br>Officially renamed SARS-CoV-2 | The virus that causes COVID-19 used to be called 'Novel Coronavirus nCoV-2019' but has now been officially renamed SARS-CoV-2 (Severe Acute Respiratory Syndrome Coronavirus 2) by the World Health Organization (WHO). Risk of infection can be reduced by:- <ul style="list-style-type: none"> <li>washing your hands often with soap and water for 20 seconds, or use alcohol-based hand sanitiser (e.g. before and after eating, and after going to the toilet)</li> <li>cover coughs and sneezes with a tissue and dispose of it straight away; wash your hands afterwards</li> <li>cough or sneeze into your (flexed) elbow</li> <li>cough away from other people</li> <li>stay more than 1.5 metres away from people when out in public.</li> </ul>   |
| Symptoms   | Common symptoms of COVID-19 include: <ul style="list-style-type: none"> <li><u>fever</u></li> <li>flu-like symptoms, such as <u>coughing</u> or sneezing</li> <li><u>difficulty breathing</u>, which may develop into <u>pneumonia</u></li> <li><u>sore throat</u></li> <li><u>fatigue</u></li> </ul> CHECK YOUR SYMPTOMS — Use the <a href="#">Coronavirus (COVID-19) Symptom Checker</a> to find out if you need to seek medical help.   |
| Probable Case  | A <b>probable case</b> of coronavirus (COVID-19) is someone who: <ul style="list-style-type: none"> <li>has coronavirus (COVID-19) symptoms, <b>AND</b></li> <li>lives in the same household — or household-like setting, such as in a boarding school or hostel — as either a person with confirmed COVID-19 infection or someone with coronavirus (COVID-19) symptoms.</li> </ul>  |
| Confirmed Case   | A <b>confirmed case</b> is a person who tests positive for the virus that causes COVID-19. This requires special testing in public health laboratories. If you have been identified as a contact of a person with confirmed COVID-19 infection in Australia, your local public health unit will get in touch with you and provide advice.  |
| 'Casual contact'   | A <b>casual contact</b> is someone who has been in the same general area as a person who has tested positive for COVID-19 while infectious. You are a casual contact if: <ul style="list-style-type: none"> <li>you have had less than 15 minutes face-to-face contact (in any setting) with a <u>confirmed or probable</u> case (including in the 24 hours before their symptoms appeared)</li> <li>you have shared a closed space with a confirmed or probable case for less than 2 hours (including in the 24 hours before their symptoms appeared)</li> </ul> <b>Casual contacts do <i>not</i> need to be excluded from work or school while well.</b> <p>You must closely monitor your health and <b>if</b> you experience any symptoms, you should <u>isolate yourself</u>. Use the healthdirect Symptom Checker, below, if you develop symptoms such as <u>fever</u>, <u>cough</u>, <u>sore throat</u> or <u>shortness of breath</u>.</p> |
| 'Close contact'  | <b>Close contacts</b> of a person with a confirmed or probable COVID-19 infection are at higher risk of infection. However, it's important that everyone understands the symptoms of COVID-19 and seeks medical attention if feeling unwell. If you've been in close contact with the infected person (including in the 24 hours before their symptoms started), you need to isolate yourself at home for 14 days after the contact, monitor your health and report any symptoms to your local public health unit. Close Contact means:- <ul style="list-style-type: none"> <li>more than 15 minutes of face-to-face contact (in any setting) with a person with confirmed or probable COVID-19 (including in the 24 hours before their symptoms appeared)</li> <li>has shared a closed space with a person with confirmed or probable COVID-19 for more than 2 hours (including in the 24 hours before their symptoms appeared)</li> </ul>      |

| Social Distancing                                | <p>Social distancing helps reduce the risk of a virus being transmitted.</p> <p>Social distancing includes:</p> <ul style="list-style-type: none"> <li>• avoiding crowds and mass gatherings where it is hard to keep a reasonable distance from others (about 1.5 metres)</li> <li>• avoiding small gatherings in enclosed spaces</li> <li>• keeping 1.5 metres between you and other people</li> <li>• not shaking hands, hugging or kissing</li> <li>• not visiting vulnerable people, such as those in aged-care facilities or hospitals, babies or people with weakened immune systems</li> </ul>   |
| Self-Isolate                                     | <p>Self-isolation is when you remain in your home or accommodation and avoid contact with other people. Most people who need to self-isolate will probably be advised to do so for 14 days.</p> <p>During isolation, you must stay at home or in your accommodation for 14 days. Don't go to public places or places where you might have contact with other people, such as work, school, childcare, university or public gatherings.</p> <p>Only people who usually live with you should be in the same home. Avoid seeing visitors. If you are in another form of accommodation, such as a hotel, avoid contact with other guests or staff.</p> <p>When travelling home or to your accommodation to start isolation, use personal transport, such as a car, if you can. This will minimise your exposure to others.</p> <p>When in isolation, monitor yourself for symptoms including <a href="#">fever</a>, <a href="#">cough</a> or <a href="#">shortness of breath</a>. Other early symptoms include chills, body aches, <a href="#">sore throat</a>, runny nose and <a href="#">muscle pain</a>.</p> <p>If you become unwell, all other members of your household must self-isolate. Use the Symptom Checker to find out what to do next.</p> <p>If the Symptom Checker tells you to seek medical help, it is very important that you call <b>before</b> visiting your doctor or the hospital emergency department, to describe your symptoms and travel history. The doctor will provide further advice on self-isolation and testing for everyone who lives with you.</p> |
| What should I do if I develop COVID-19 symptoms? | <p><b>If you have severe difficulty breathing, call triple zero (000) immediately</b> and tell the call handler and the paramedics on arrival about your recent travel history and any close contact with an infected person.</p> <p>If the Symptom Checker tells you to seek medical help, it is very important that you call <b>before</b> visiting your doctor or the hospital emergency department, to describe your symptoms and travel history.</p> <p>You can also call the Australian Government's National Coronavirus Helpline on <b>1800 020 080</b></p> <p>CHECK YOUR SYMPTOMS — Use the <a href="#">Coronavirus (COVID-19) Symptom Checker</a> to find out if you need to seek medical help.</p>  |
| How is COVID-19 diagnosed?                       | <p>Your doctor (GP), or the medical staff at a testing clinic or hospital emergency department may take swabs from the back of your nose and throat, or fluid from your lungs, to diagnose your illness. Swabs and fluid are sent to public health laboratories for testing for COVID-19.</p>  |
